

OUR ENVIRONMENTAL FOOTPRINT

Our Green Office

From fitting our office out with upcycled second-hand furniture to installing occupancy sensors to reduce our electricity consumption, we continuously seek to improve our resource footprint. We are proactive when buying products and try to avoid single-use plastics in our purchasing decisions. We recycle all our waste and have a strict zero-food waste policy.

2019 Environmental Impacts

Electricity Consumption	2212kWh
Heating Purchased	9504kWh
Waste Produced – Plastic	95.1kg
Waste Produced - Paper & Cardboard	51kg
Waste Produced – Glass	4.4kg
Total Waste Recycled	37%

Vegan Wednesday

“You get out what you put in” is a philosophy that we have adopted here at Nexio Projects and is why we have taken an active interest in shifting our eating habits towards the sustainable end of the spectrum. All our team members are health and diet conscious, with 80% of our office actively following a vegetarian lifestyle. To encourage our team further and even raise awareness amongst other companies we share a floor with, we have started the ‘Vegan Wednesday’ initiative. Every Wednesday, we endeavour to only eat vegan options as a team.

Employee Commuting

To further limit our environmental impact, we encourage all employees to use the most environmentally friendly modes of transport. Due to the proximity of most of our team to the office, cycling is the most popular form of transport used. After cycling, public transport, (trains, trams and busses) is the next most common form of transport taken, followed by private vehicles. Marc, our CEO, has opted for a hybrid car as his vehicle of choice, and there are plans to switch to a fully electric vehicle sometime in the future!

“At Nexio Projects, we take our own environmental footprint very seriously, however small it may be. Even small actions, multiplied over and over again, can make a big impact.”

Leon Laubscher
